Alex Example

Austin, Texas | alex.example@example.com | 202-555-0146

Summary

Software engineer developing applied machine-learning projects with Python, clear evaluation, and tested API delivery. Experience with input validation, reproducible setup, and documented limitations.

Skills

Python, SQL, pandas, scikit-learn, PyTorch, FastAPI, Docker, Git, automated testing

Experience

Software Engineer | Example Workflow Systems

July 2023 - September 2026

- Built and maintained Python API endpoints with input validation and tests for invalid and duplicate requests.
- Investigated failed data imports, documented recurring causes, and added validation before downstream processing.
- Maintained reproducible local setup instructions and reviewed changes with the engineering team.

Selected Project

Support Ticket Classifier | Personal project

2026

- Created a synthetic labeled dataset and compared a simple baseline with a trained classifier on a held-out evaluation set.
- Reviewed confusion between related categories and documented errors and limitations instead of claiming universal accuracy.
- Exposed predictions through a validated FastAPI endpoint and added tests for empty input and unsupported categories.

Education

Bachelor of Science in Computer Science | Example University | 2023
